Node js & React Additional Resources

Javascript

I started with a javascript tutorial project since I wasn't super familiar with the language.

This tic tac toe game gave me a nice overview of javascript, CSS, and HTML

Node js

Node js can be installed from https://nodejs.org/en/ & comes with a nice installer.
- Node js is a framework for running javascript code

React

For React I followed another tic tac toe web page tutorial that guides you through setting up a react project, components, & the structure/syntax of the language.
- https://reactjs.org/tutorial/tutorial.html

Here is another tutorial project I found that does a pretty good job walking you through React's features. I only read through this one but it covers similar topics to the tic tac toe project (and is slightly more complex).
